

Amendments to the Specification:

On page 2, please delete the second paragraph spanning lines 6-8 in its entirety as follows:

~~That object is achieved by a device having the features of claims 1 and 12 and by a method having the features of claim 13. Advantageous embodiments are contained in the subsidiary claims.~~

On page 6, please amend the paragraph beginning on line 27 and continuing to page 7, line 2 as follows:

When in step d) only a section of the map image and/or of the current image are/is used, the device corresponds to a variant of the above-defined device ~~as claimed in claim 1~~. For a more detailed explanation, the reader can therefore be referred largely to the above description. According to an independent aspect of the invention, the above-defined device nevertheless also includes the case in which a different section of the map image or the entire map image is superimposed on the current image. The advantage of the device in this regard lies in enabling an error-tolerant superimposition in real time with a probability- based segmentation and a distance imaging, which significantly increases the value of the superimposition, for example, within the scope of a monitor display.

After the last paragraph on page 10 ending on line 13, please add the following new paragraph:

The invention has been described with reference to the preferred embodiments. Modifications and alterations may occur to others upon reading and understanding the preceding detailed description. It is intended that the invention be constructed as including all such modifications and alterations insofar as they come within the scope of the appended claims or the equivalents thereof.
